

VOLUMETRICS

Production Reports

Produced volumes, lost production, uplift, downtime, and production capability.

Decline Analysis

Produced volumes vs budgeted decline variance. Wells with the greatest variance can be easily identified.

Emissions notifications

Venting and flaring emissions leading indicators to proactively mitigate regulatory action.

CAPITAL AND OPERATIONS

AFE Estimates vs Actual Cost and Accruals

More timely visibility of costs as they are accrued and invoiced. Assets with cost variances can be identified and managed proactively.

Netback Analysis

Netback by well/field/area broken down by various categories such as fixed/variable operating costs, accruals, royalty expenses, operating income, Op Costs per BOE, and comparisons to previous periods.

Lease ops

Revenue, Sales Volumes, Royalty, OPEX, and realized sales prices per product.

MERGERS & ACQUISITIONS

Easy integration of acquired data

Acquired assets can be imported into the reporting model as soon as the acquisition is made, prior to systems integration.

REGULATORY COMPLIANCE

Regulatory Document Management

Leveraging the integration of SharePoint online and PowerBI allows the business to understand current regulatory compliance. Expired and missing documents can be proactively identified.
